

## SQL REPORTS/TASKS PERIODICALLY RUN OR AS NEEDED

as of 8/20/04

If you have a lot of borrowers with email addresses but nothing in the email name field this script will populate the email name field with the information in the email address field.

```
update borrower_address
set email_name = email_address
where email_address is not null
and email_name is null
```

If you have run notices and get a bucket error this script will identify the borrower record causing the error. Most likely it will have an email address but nothing in the email name field. Run script, identify borrower, fix record.

```
select ba.borrower#, ba.email_name, ba.email_address
from borrower_address ba, notice n
where n.borrower# = ba.borrower#
and ba.ord = 0
and ba.send_notice_by = 1
and email_name is NULL
order by email_name
```

To batch switch borrowers with email addresses to receive email notices. This will change the borrowers 100 at a time.

```
set rowcount 100
update borrower_address
set send_notice_by = 1
where send_notice_by = 0
and email_address like '%@%'
set rowcount 0
```

To batch change the phone type run this script.

```
update borrower_phone
set phone_type = 'h-noTC'
where phone_type = 'h'
```
